MORE PEOPLE WORKING ON FARMS THAN LAST YEAR, CONTINUING TREND

The number of persons working on farms June 1 was 4 percent greater than a year earlier, continuing the trend of the previous 2 months, the Bureau of Agricultural Economics announced today. The total, including family and hired workers, was 11,422,000 persons.

Weather conditions on June 1 were less favorable for farm work than a year earlier. Most of the South and all of North Central and North-eastern States received rain enough to interrupt field work. Rainfall for the week ended June 4 averaged two to six inches in an area including eastern Texas, Louisiana, most of Alabama, Mississippi, central Georgia, and the southern half of Oklahoma and Arkansas.

The postwar shift toward shorter working hours, first noted on March 1, is continuing. Farm operators on June 1 averaged 12.2 hours work per day, considerably less than the 12.8 hours in June 1943 and 1944, although about the same as in 1940. Hired hands on June 1 this year were working an average of 10.1 hours per day, a decline of 0.6 hour from the wartime high. The hours of hired workers were below the 1940 average.

By regions, the number of family workers employed was from 1 to 7 percent larger than a year earlier and was 4 percent larger in the Nation as a whole. The greatest increases were in the South Central and the Mountain States. In the northern parts of the country the number of family workers employed on farms totaled about the same as the June 1 prewar average. In the South, the number of family workers employed was still about 10 percent smaller than the prewar average for this date, and the Pacific Coast States had 3 percent fewer family workers employed than average.

The number of hired workers on June 1 was 4 percent larger than a year earlier, but still nearly 20 percent less than the prewar average for the date. The largest increase over last year was 16 percent in the East South Central States. The next largest increases were made by the Pacific Coast States, with a 10 percent gain, and by the West North Central States, with a gain of 9 percent. In the South Atlantic States the number of hired farm workers was 4 percent less than a year earlier and in the Middle Atlantic States it was 1 percent less.

UNITED STATES DEPARTMENT OF AGRICULTURE
Bureau of Agricultural Economics

In the Northeast and North Central States, seasonal increases in the number of hired workers from May 1 to June 1 were only about half as large as a year ago. Last year, weather conditions on June 1 were more favorable for field work than this year. Also, last year at this time there was a rush to complete the much-delayed spring planting. This year, weather in April and May permitted spring operations to proceed with little delay. The increase of 24 percent from May 1 to June 1 in the number of hired farm workers is about the same as a year earlier, but much above the 15 percent average gain in 1935-39. Almost all regions show this change in numbers of hired workers, but the seasonal curve of family labor was about the same as before the war. It thus appears that, during the present period of relatively short supplies of labor and high wage rates, farmers are doing as much of their early spring work as possible with family help and postponing the employment of hired labor until later than in 1935-39.

Farm work in the New England States proceeded slowly during May, because of wet cold weather. Heavy rains around June 1 in the southern part of the region further delayed field work. However, the number of persons working on farms was slightly larger than a year earlier, when weather conditions were similarly unfavorable for planting. This year, the big task of planting potatoes in Aroostook County, Maine had been practically completed by June 1.

Heavy rains and floods in northern and central Pennsylvania and western New York about June 1 interfered with field work in the Middle Atlantic States. The number of hired workers increased only half as much during May as in May 1945 and on June 1 was slightly less than a year before. Increases from last June in the number of family workers brought a gain from last year in the total number of persons at work on farms. Field work in New York and Pennsylvania consisted largely of the completion of spring planting. In central New Jersey the hay harvest was in progress. In southern New Jersey, the strawberry and lettuce harvests were in full swing and cherry harvest was just beginning.

In the East North Central States, the number of family workers employed on June 1 was 3 percent above a year earlier and slightly above the average. The number of hired workers was about the same as a year earlier. More favorable weather than a year ago made possible a more orderly schedule of spring planting operations. Most of the corn crop was planted, although rain was causing some delay around June 1 in southern Illinois and Indiana and in eastern and southern Ohio.

In the West North Central States, substantial progress was being made with field work. Some interference by rain was reported in western and southeastern Kansas and in southern Missouri, but rainfall was light in other areas. Corn planting was being completed in much of the region, the alfalfa hay harvest was under way in most areas and harvest of small grains had started in southern Missouri. The number of family workers employed on farms was 2 percent above a year earlier and slightly above the prewar June 1 average. The increase in the number of hired workers during May was only half as large as last year, but on June 1 there were 9 percent more hired workers employed on farms than a year before. With much less pressure to complete delayed work and little difference in weather conditions, numbers of both family and hired workers on June 1 this year were significantly larger than last year.

UNITED STATES DEPARTMENT OF AGRICULTURE
Bureau of Agricultural Economics

In most of the South, field work was possible during only a few days of the week ended June 1. Continuation of the rainy weather was keeping workers out of corn and cotton fields, and grass and weeds were becoming a problem. Poor stands of both crops were necessitating **much** replanting.

In the South Atlantic States, the number of family workers employed on June 1 was a little above a year earlier, but the number of hired workers was 4 percent less. Crop cultivation was under way wherever possible. Peach harvest continued in Georgia and extended to North and South Carolina. Commercial potato harvest was progressing in the southern sections of the region and was starting as far north as Virginia. Oats and barley were being harvested in North and South Carolina, with strong demand reported from South Carolina for custom harvest work.

The number of persons employed on farms in the East South Central States on June 1 was 7 percent larger than a year earlier, the largest regional increase. Although the number of hired workers was 16 percent larger than a year earlier, more than two-thirds of the increase in total employment came from a 5 percent increase in the number of family workers. Field work was being pushed as rapidly as weather permitted, making up for delays earlier in the month. The last of the commercial early potato crop was being harvested in Alabama. Small grains were also being harvested in Alabama and Mississippi.

In the West South Central States the number of hired workers increased by nearly half from May 1 to June 1. The total was 7 percent greater than on June 1, 1945. The number of family workers was above a year earlier by the same percentage, but showed about the usual seasonal advance. Harvest of small grains was under way in most of the region, with wheat harvest of importance in the southern High Plains of Texas and in western Oklahoma to the Kansas State line. Rice was still being planted in Arkansas, where only about half the crop was in.

Most spring crops had been planted in the Mountain States by June 1. Cultivation of row crops was in progress, with thinning of sugar beets an important job. Summer following operations and irrigation also claimed the services of sizeable numbers of workers. Harvest of carrots, onions, and potatoes were major truck crop operations in Arizona. About the same number of hired persons were at work on farms as a year earlier, but the number of family workers was significantly larger.

Employment of hired workers in the Pacific Coast States advanced sharply from a year earlier to a point 21 percent above the prewar average. The number of family workers was only slightly above a year earlier and 3 percent less than average. In addition to work on general field crops, much time was spent on specialty crops. In Washington, thinning fruit and strawberry picking were in progress. Harvest of early vegetables and cultivation of the later crop, citrus harvest, thinning peaches and plums, and harvesting cherries were major jobs in California. In addition, thinning sugar beets, chopping cotton, cutting and baling hay were of importance. Flax harvest had started in the Imperial Valley.

CALIFORNIA

bonus per month of 30 cents for each daily average pound of milk drawn in excess of the following base poundage: 1,000 pounds Holstein strings; 900 pounds, mixed strings, 800 pounds, Jersey and Guernsey strings. For machine milking of long strings the maximum additional payment shall be the bonus per month of 15 cents for each pound drawn in excess of the base poundage; or \$4 per month for each cow in excess of 60 cows (52 cows on certified dairies), whichever is greater. For hand milking of long strings the maximum additional payment shall be the bonus per month of 30 cents for each pound drawn in excess of the base poundage, or \$8 per month for each cow in excess of 30 cows (26 cows on certified dairies), whichever is greater. For relief milkers the maximum wage paid shall be the highest wage paid to any milker of a string which is relieved. Maximum payment for milking less than a string by machine or by hand shall be in proportion to the base pay as the actual number of cows milked bears to 60 or 30 cows for machine and hand milk respectively (52 or 26 cows on certified dairies) or as the actual daily poundage of milk drawn bears to the applicable base poundage, whichever is greater; provided, however, that milkers on short strings doing other jobs may receive additional compensation at the legal rate for the other job or jobs for the proportionate time spent on such other job or jobs. Extra turn-ins, \$5.00 additional per month may be allowed if turn-ins are in excess of 3 per milking. Emergency milkers for one milking, \$7; for periods of 1 to 6 days, inclusive, \$14 per day. Milk-house men, machine or can, \$210 per month.
